ROADMAP

ABOUT US

\$GTF—Goat Farming, the goat dream factory for leeks, it is really "the leeks on the grassland can't stop being harvested"! This coin took off with the goat farming craze. There are so many goats that you can form a mini hip-hop group. They have plenty of milk, fresh meat, thick fur, and a basket of ways to make money. It is simply a textbook example of "diversified leek farming". The community atmosphere is enthusiastic, and the enthusiasm of coin holders shouting "go to the moon" is as unstoppable as the lambs jumping around. Even the NFT linkage has kept up with the rhythm, making everyone excited. But don't forget, market fluctuations are as tortuous as the uphill road of a goat. Be careful or you may be "cut to pieces". After all, raising goats is risky, so you need to be cautious when entering the circle. In short, this "crypto goat" has become a darling of social media and a star token at farm parties. Are you ready to take off with it.

WHY \$GTF

By investing in a goat farming operation, you can tap into the dual revenue streams of milk and meat production. With the right management and infrastructure in place, a goat farming operation can generate significant revenue and provide a rapid return on investment.

In fact, a well-managed goat farm can provide a return on investment of up to 20-30% per annum, making it a highly attractive investment opportunity. Additionally, the demand for goat products is increasing globally, providing a stable and growing market for investors to tap into.

\$GTF KEY COMPONENTS

Initial Stock: We have commenced operations with 50,000 goats, carefully selected for their high-quality genetics and adaptability to diverse environments.

NGO Partnerships: We have established partnerships with reputable NGOs to distribute our goats to rural communities and villages. These partnerships enable us to promote sustainable agriculture, improve local livelihoods, and ensure the humane treatment of our animals.

Scalability: Our project is designed to scale rapidly, with plans to expand our goat stock to 200,000 within the next 24 months.

Domestic and International Markets: We will target both domestic and international markets, capitalizing on the growing demand for goat meat, milk, and hide products.

Technology Integration: We will leverage advanced agricultural technologies, such as precision farming, animal tracking, and data analytics, to optimize our operations, improve efficiency, and reduce costs.

\$GTF KEY VARIABLES

Goats provide two valuable revenue streams: milk and meat. Goat milk is a highly sought-after product, particularly in the production of cheese, butter, and other dairy products. In fact, goat milk is often considered a premium product, commanding a higher price than cow milk.

Goat meat, on the other hand, is a staple in many cuisines around the world. It's a lean protein that's rich in nutrients and low in fat, making it an attractive option for health-conscious consumers. The demand for goat meat is increasing globally, driven by growing populations and changing consumer preferences.

Goats are renowned for their remarkable reproductive capabilities. They can breed year-round, and their gestation period is a mere 150 days. This means that goats can give birth to multiple kids per year, allowing farmers to rapidly expand their herd and increase their revenue.

\$GTF Tokenomics

- Total Supply: 1,000,000,000 \$GTF
- Circulating Supply: 1,000,000,000 \$GTF (initially)

'Token Allocation'

- 'Ecosystem Development': 30%
 - Goat farm expansion
 - Technology integration
- Marketing and partnerships
 - 'Token Sale': 20%
 - Public sale
 - Private sale
- 'Team and Advisors': 15%
 - Team members
 - Advisors
- 'Partnerships and Collaborations': 10%
 - Strategic partnerships
 - Collaborations
- 'Reserve': 25%
 - Future development
 - Contingency fund

\$GTF RoadMap

Project Announcement: Introduce \$GTF to the crypto community.
Token Creation: Develop and deploy the \$GTF token on the blockchain.

Whitepaper Release: Publish the project's whitepaper, outlining the vision, mission, and technical details.

Community Building: Establish social media presence and online forums for community engagement.

Goat Farm Establishment: Set up the initial goat farm and begin operations.

Technology Integration: Implement blockchain-based solutions for supply chain management and animal tracking.

Partnership Development: Collaborate with suppliers, distributors, and industry experts to expand the ecosystem.

Token Listing: List \$GTF on reputable cryptocurrency exchanges.

Farm Expansion: Scale up goat farm operations to increase production capacity.

Decentralized Application (dApp) Development: Create a dApp for \$GTF holders to participate in governance, track farm operations, and access exclusive rewards.

Influencer and Community Partnerships: Partner with social media influencers and community leaders to promote \$GTF

Strategic Partnerships: Collaborate with key players in the agriculture and cryptocurrency industries.

International Expansion: Establish partnerships with goat farms and distributors in new regions.

Sustainability Initiatives: Implement environmentally friendly practices and renewable energy sources in farm operations.

\$GTF Staking and Validation: Introduce staking and validation mechanisms for \$GTF holders to participate in the network.

Decentralized Finance (DeFi) Integration: Explore DeFi opportunities, such as lending and borrowing, within the \$GTF ecosystem.

Research and Development: Continuously explore new technologies and innovations to improve farm operations and the \$GTF ecosystem.

Community Engagement: Foster a strong, engaged community through regular updates, AMAs, and events.

Strategic Acquisitions: Pursue strategic acquisitions to expand the \$GTF ecosystem and increase its global presence.
